What Do Germs Look Like?

If you could see the germs on your hands, what would they look like? Draw germs on the dirty hand on the left and color in the shiny clean hand on the right.

Help Children Learn

Talk about the fact that germs are invisible unless people use special tools (such as a microscope) to see them. Ask children, “Can you see germs on your hands? How do you know they are there? What can we use to be sure the germs are gone?” Help children understand that when they clean their hands with soap and water, they are wiping away the invisible germs that can make them sick.
